

Hospital-based Approaches for Building a Culture of Health

Hospitals and health care systems are part of the movement to build a **culture of health**, where all people have the opportunity to live longer, healthier lives, whatever their background.

Factors to consider as hospitals collaborate with community partners to foster a culture of health:

Hospital

- » Mission alignment
- » Leadership commitment
- » Resources

Community

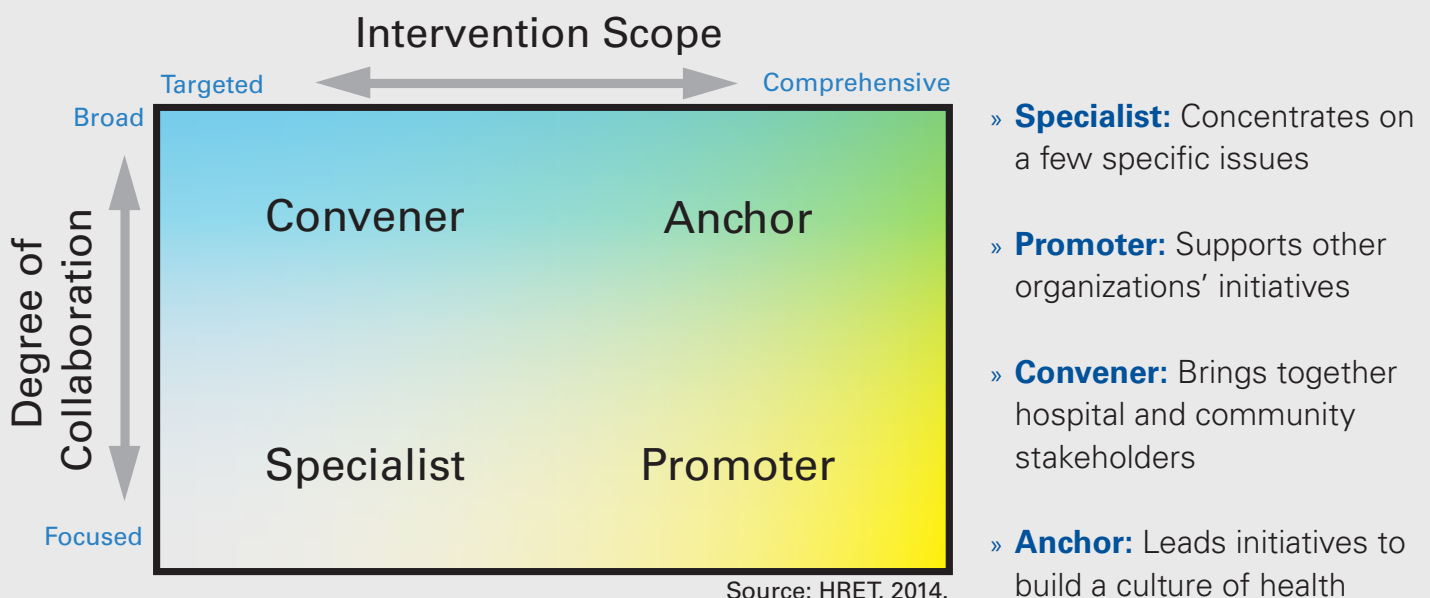

- » Needs
- » Readiness
- » Shared goals

Stakeholders/Partners

- » Availability
- » Resources
- » Shared goals

Hospitals can decide the **scope of their interventions** and **degree of collaboration** to determine their **role** in building a culture of health.
