DELIVERING QUALITY WITH DISTINCTION

2012 Quality Excellence Achievement Awards

OVERVIEW

The Illinois Hospital Association's (IHA) Institute for Innovations in Care and Quality (The Institute) second annual Quality Excellence Achievement Awards recognizes and celebrates the achievements of Illinois hospitals that are committed to transforming Illinois health care through innovative approaches and best practices.

From 67 submissions representing 40 hospitals, awards were presented to a total of eight hospitals in two categories: urban and rural/critical access. The two award recipients and six finalists, who were honored at IHA's annual Leadership Summit, were selected by a panel of 30 nationally-recognized quality improvement leaders based on their achievement and progress in advancing one or more elements of the Institute of Medicine's six aims for improvement:

- Safety
- Effectiveness
- Timeliness
- Efficiency
- Equity
- Patient-centered care

To share these initiatives among members, The Institute has published this compendium that provides a synopsis of all award entries along with contact information for additional details. The compendium receives national exposure by being featured annually on the Hospitals in Pursuit of Excellence (HPOE), an AHA affiliate, website.

Project Title: *Glycemic Collaborative—A Multidisciplinary Team Created to Assist with Glycemic Control in an Acute Hospital Setting*

Summary: The glycemic collaborative is an ongoing, multidisciplinary initiative developed to improve blood glucose management for adult hyperglycemic patients during acute inpatient hospitalization. The goals are to develop improvement strategies that will manage blood gluceses to prevent hypoglycemia (blood glucose of 40mg/dL or less) and to prevent/reduce hyperglycemic events by assisting the hospital to maintain average glucose values between 70 and 180 mg/dL. The team met monthly to review data, discuss improvements and complete small tests of change.

Over two years, there has been a decrease of hypoglycemic events in the Intensive Care Unit, and an increase in the average gluceses between 70mg/dL and 180mg/dL in the Medical/Surgical and Intensive Care Units.
