DELIVERING QUALITY WITH DISTINCTION

2012 Quality Excellence Achievement Awards

OVERVIEW

The Illinois Hospital Association's (IHA) Institute for Innovations in Care and Quality (The Institute) second annual Quality Excellence Achievement Awards recognizes and celebrates the achievements of Illinois hospitals that are committed to transforming Illinois health care through innovative approaches and best practices.

From 67 submissions representing 40 hospitals, awards were presented to a total of eight hospitals in two categories: urban and rural/critical access. The two award recipients and six finalists, who were honored at IHA's annual Leadership Summit, were selected by a panel of 30 nationally-recognized quality improvement leaders based on their achievement and progress in advancing one or more elements of the Institute of Medicine's six aims for improvement:

- Safety
- Effectiveness
- Timeliness
- Efficiency
- Equity
- Patient-centered care

To share these initiatives among members, The Institute has published this compendium that provides a synopsis of all award entries along with contact information for additional details. The compendium receives national exposure by being featured annually on the Hospitals in Pursuit of Excellence (HPOE), an AHA affiliate, website.

Project Title: *Elimination of Central Line-Associated Blood Stream Infections through Best Practices in an Urban Acute Care Hospital*

Summary: Following a high rate of central line-associated blood stream infections (CLABSI) in the fourth quarter of 2008, a performance improvement project was initiated with the goal of eliminating all CLABSIs while providing safe, effective, efficient, and patient-centered care to patients with central lines. A coordinated interdisciplinary plan was put in place and strict adherence to central line insertion site planning and procedural protocols was enforced.

Observing hand hygiene, maximal barrier precautions, Chlorhexidine skin antisepsis, optimal catheter site selection (subclavian vein preferred), daily review of line necessity, and assignment of daily rounding and site care and dressing changes to the IV Therapy Team for care continuity have resulted in a zero CLABSI rate since the second quarter of 2009.
