DELIVERING QUALITY WITH DISTINCTION

2012 Quality Excellence Achievement Awards

OVERVIEW

The Illinois Hospital Association's (IHA) Institute for Innovations in Care and Quality (The Institute) second annual Quality Excellence Achievement Awards recognizes and celebrates the achievements of Illinois hospitals that are committed to transforming Illinois health care through innovative approaches and best practices.

From 67 submissions representing 40 hospitals, awards were presented to a total of eight hospitals in two categories: urban and rural/critical access. The two award recipients and six finalists, who were honored at IHA's annual Leadership Summit, were selected by a panel of 30 nationally-recognized quality improvement leaders based on their achievement and progress in advancing one or more elements of the Institute of Medicine's six aims for improvement:

- Safety
- Effectiveness
- Timeliness
- Efficiency
- Equity
- Patient-centered care

To share these initiatives among members, The Institute has published this compendium that provides a synopsis of all award entries along with contact information for additional details. The compendium receives national exposure by being featured annually on the Hospitals in Pursuit of Excellence (HPOE), an AHA affiliate, website.

Project Title: *One Step at a Time: Addressing Hypoglycemia Adverse Drug Events by Improving Insulin Management Through Rapid Cycle Improvement and Spread Process*

Summary: After several monthly reviews of reported adverse drug events, hypoglycemia ranked highest for the hospital. Upon further review, the majority of hypoglycemic events were associated with the use of insulin, a high-alert medication. In fall 2011, a multidisciplinary team was created to develop a standardized diabetes order set and hypoglycemia treatment protocol, and update an outdated diabetes flow sheet.

Despite the time and resources dedicated to these efforts, there was little to no adoption of new standardized processes. Hypoglycemic events remained unchanged. The hospital then de-escalated their approach to a unit specific pilot with continuous Plan-Do-Study-Act (PDSA) cycles and education on the floors by decentralized clinical staff pharmacists, nurse educators and clinical dietitians.

Three months later, hypoglycemic events have decreased by 34%.
