### HC3 Sector Alert: PwnedPiper Impact on Healthcare

TLP:WHITE

Aug 03, 2021

Nine vulnerabilities (dubbed PwnedPiper) were recently discovered in a brand (Swisslog) of pneumatic tubes – the tube systems within many hospitals and other healthcare organizations which transports small items such as lab samples, blood, tissue or medication from one part of the medical facility to another – which can allow a cyber attacker to compromise and/or disrupt the operations of the system. These vulnerabilities are believed to impact over 3,000 hospitals worldwide, including 80% of all hospitals in North America. All healthcare organizations are urged to review this document and apply the appropriate steps outlined in the mitigation section as needed.

For additional details, please see the full, attached report.
