## HC3: Monthly Cybersecurity Vulnerability Bulletin

TLP:WHITE

Jun 14, 2023

On June 14, 2023, the Health Sector Cybersecurity Coordination Center (HC3) shared a report "May 2023 Vulnerability Bulletin" regarding vulnerabilities to the health sector have been released that require attention. This includes the monthly Patch Tuesday vulnerabilities released by several vendors on the second Tuesday of each month, along with mitigation steps and patches. Vulnerabilities for May are from Microsoft, Google/Android, Apple, Mozilla, SAP, Cisco, Fortinet, VMWare, and MOVEit. A vulnerability is given the classification as a zero-day if it is actively exploited with no fix available or is publicly disclosed. HC3 recommends patching all vulnerabilities, with special consideration to the risk management posture of the organization.

Please see the attached report for details or search the Doc Library under Government > HC3 > HC3 Monthly Cybersecurity Vulnerability Bulletin
